

Security Incident Audit: INC-001

Generated on 2026-08-20 17:38:41 UTC | Automated Incident Analysis

Incident Title:	Database Credential Abuse	Severity:	Critical
Calculated Risk Score:	79 / 100	Incident Status:	Investigating
Attacker Vector:	185.190.140.23 (Netherlands)	Orchestration State:	Simulated Autonomous Playbook

AI Threat Reasoning & Incident Summary

Autonomous investigation suggests a correlated threat vector labeled 'Database Credential Abuse'. Currently in 'Investigating' status with a calculated risk index of 79/100. The incident links 2 active security alert(s) across EDR and network sensors. Automated containment procedures are ready to run.

Observed Incident Timeline

Time (UTC)	Correlated Event Description
10:12:00	Anomalous database login attempt
10:15:00	LSASS registry dumping pattern detected
17:38:41	Correlated Alert: Brute Force Password Guessing (Severity: High) from AD-PRIMARY-CONTROLLER
17:38:41	Simulated Response: 'Disable User' executed by Alex Mercer (analyst).
17:38:41	Simulated Response: 'Disable User' executed by Alex Mercer (analyst).

Recommended & Simulated Containment Actions

#	Action Type	Execution Mode
1	Isolate Database Instance	Simulated (Safe Sandbox)
2	Revoke DB Account Permissions	Simulated (Safe Sandbox)

Forensic Log Evidence

Correlated events trace LSASS memory dumps via EDR.
