|                        |                                           |                      |                               |
|------------------------|-------------------------------------------|----------------------|-------------------------------|
| Incident Title:        | Database Credential Abuse & LSASS Dumping | Severity:            | Critical                      |
| Calculated Risk Score: | 96 / 100                                  | Incident Status:     | Investigating                 |
| Attacker Vector:       | 185.190.140.23 (Netherlands)              | Orchestration State: | Simulated Autonomous Playbook |

## AI Threat Reasoning & Incident Summary

Autonomous correlation confirms unauthorized access using brute-forced credentials.

## Observed Incident Timeline

| Time (UTC) | Correlated Event Description            |
|------------|-----------------------------------------|
| 10:12:00   | Anomalous database login attempt        |
| 10:15:00   | LSASS registry dumping pattern detected |

## Recommended & Simulated Containment Actions

| # | Action Type                   | Execution Mode           |
|---|-------------------------------|--------------------------|
| 1 | Isolate Database Instance     | Simulated (Safe Sandbox) |
| 2 | Revoke DB Account Permissions | Simulated (Safe Sandbox) |

## Forensic Log Evidence

LSASS memory dump signature 098f6bcd4621d373cade4e832627b4f6.
